 ASTM F593 Technical Manual

1. Introduction

The ASTM F593 specification covers the chemical and mechanical requirements for stainless steel bolts, hex cap screws, and studs in diameters ranging from 1/4 to 1 1/2 inclusive. This standard covers fasteners made from austenitic stainless steel such as 304L, 316L, and 321.

2. Chemical Composition

The chemical composition of stainless steel bolts, hex cap screws, and studs must meet the requirements specified in Table 1. The table includes minimum and maximum limits for carbon, manganese, phosphorus, and sulfur.

3. Mechanical Properties

The mechanical properties of stainless steel bolts, hex cap screws, and studs must meet the requirements specified in Table 2. These properties include minimum yield strength, minimum tensile strength, and minimum hardness.

4. Heat Treatment

The ASTM F593 specification requires that stainless steel bolts, hex cap screws, and studs be heat treated to ensure proper mechanical properties. The heat treatment requirements are specified in Table 3.

5. Marking

The ASTM F593 specification requires that stainless steel bolts, hex cap screws, and studs be marked with information such as the material composition, heat treatment, and manufacturing date.

6. Application

Stainless steel bolts, hex cap screws, and studs are commonly used in applications where corrosion resistance is required, such as in the chemical, petrochemical, and power generation industries.

7. Conclusion

The ASTM F593 specification provides a comprehensive set of requirements for stainless steel bolts, hex cap screws, and studs. By following these requirements, manufacturers can ensure that their products meet the needs of customers in a variety of industries.
