wireless sensor networks (WSN) provide a bridge between the real physical and virtual worlds, allowing the ability to observe previously unobservable phenomena. Research on wireless sensor network (WSN) attacks has been published, for example, by Dr. R. A. Loffeld. A dissertation at the University of Technology describes the research that was done on the security aspects of WSNs, analyzing security protocols for wireless networks. A thesis submitted to the Department of Electrical Engineering described ZigBee suitability for WSNs in logistic telemetry applications. A master's thesis in Computer Systems introduced a TeleHealth Monitoring Service that uses ZigBee and WiFi. A dissertation submitted to the Department of Electrical Engineering analyzes security protocols for wireless networks. A thesis submitted to the Department of Electrical Engineering analyzes the overall signal-to-noise ratio of the system. A dissertation submitted to the Department of Electrical Engineering analyzes the overall signal-to-noise ratio of the system. A dissertation submitted to the Department of Electrical Engineering analyzes the overall signal-to-noise ratio of the system.
