DIN VDE 0107, cables and wires for electronics, underground railway networks, hospitals and outpatients clinics. DIN VDE 0107 cables and wires for electronics. The electronics industry requires cables and wires that can handle fast available capacity. The maximum temperature of 55°C must not be exceeded.

The available capacity is 20°C higher. Temperatures will reduce battery service life. Lower temperatures reduce the life of the battery.

According to DIN VDE 0100 551 1997 and other application fields, instructions and guidelines under DIN VDE 0107 or DIN VDE 0108 must also be observed. 7 faults should be observed. Faults should be detected in the batteries or charging devices. Customer services must be called immediately. Measurement data under Section 5.4 facilitate fault detection and removal. 8 storage and taking out of operation should cells or batteries be stored or taken out of operation for longer periods. DIN VDE 0100 low voltage electrical installations with up to 1000 V nominal voltage in DIN VDE 0107 low voltage electrical installations in hospitals and rooms.
