Chomsky has written over 30 books on political issues with a wide range of topics. He is an American linguist who revolutionized the field of linguistics by treating language as a uniquely human biologically based cognitive capacity. He is described as the father of modern linguistics and among the leading leftists in the world. Chomsky was born on December 7, 1928, in Philadelphia, Pennsylvania, and is an institute professor emeritus in the department of linguistics and philosophy at Massachusetts Institute of Technology. His recent books include "Who Rules the World?" and "Manufacturing Consent: The Political Economy of the Mass Media." Chomsky is known for his critiques of foreign policy, particularly regarding the Vietnam War and the use of military justification for funding. He is also a prolific commentator and has authored hundreds of articles on various platforms such as the noam chomsky website and blogs at rotten tomatoes. He is celebrated in philosophy, media, and politics, often compared to Marshall McLuhan. The general population doesn't know what's happening, and it doesn't even know that it doesn't know. His work on generative grammar has been influential in linguistics. Chomsky was a consultant on an air force project to establish English as an operational language for command and control. He is a frequent guest on Democracy Now! and has a profile on the noam chomsky website. His ongoing work includes focusing on the military justification for funding, the whole educational and professional training system, and the need for change in the educational system.
